

How to update file RIGHT

1. Connect with USB stick to PC, and click mouse right button, choose FAT32 to format.
 ---this step make sure USB stick at standard condition (we recommend USB2.0 above 2GB)

2. Download the files into USB stick and extract all the files to USB stick root directory. All of them, include the folder
 ---this step make sure all files include file folder at USB stick main folder
 Those 2 steps no need car, and no matter black NAVI screen or not, first 2 steps are SAME

3. Start the car, connect the USB stick with CarPlay USB cable.

4.The screen will ask there are new files, whether upgrade or not

----it will choose confirm automatically first time. you will see there is a number "2" at left
 Then it will come next interface --there are 3 new files copped succeed, choose left button (means yes)
 Then limcet logo comes out when it is updating,
 The whole upgrading will take around 2 minutes (depend on different files)
 After upgrading finish, it will show Licemt Logo or normal CarPlay interface.

NO NEED to click anything here

5.System will come out this interface again, **DO NOT to remove the USB stick NOW, or updating is not finished.**

and it will ask there are new files, want to update? Also, same, first time there is count backwards,
 no need to click anything, system will update automatically, after it finish, it will say 3 new files update succeed, agree or not.
REMOVE THE USB DISK NOW BEFORE. Choose the left one here.

6.System will restart again. After that, please check whether updating success--setting--system version

If at main interface, there is BMW logo, means updating is successful

If there is Limcet logo, means updating is failed, please do it again.

Update successful

Update failed
